

Unified workflow
solutions for the
E&P industry

Schlumberger and Hitachi Data Systems Unified E&P Storage Solutions

Integrated storage solutions for petrotechnical analysis
and interpretation

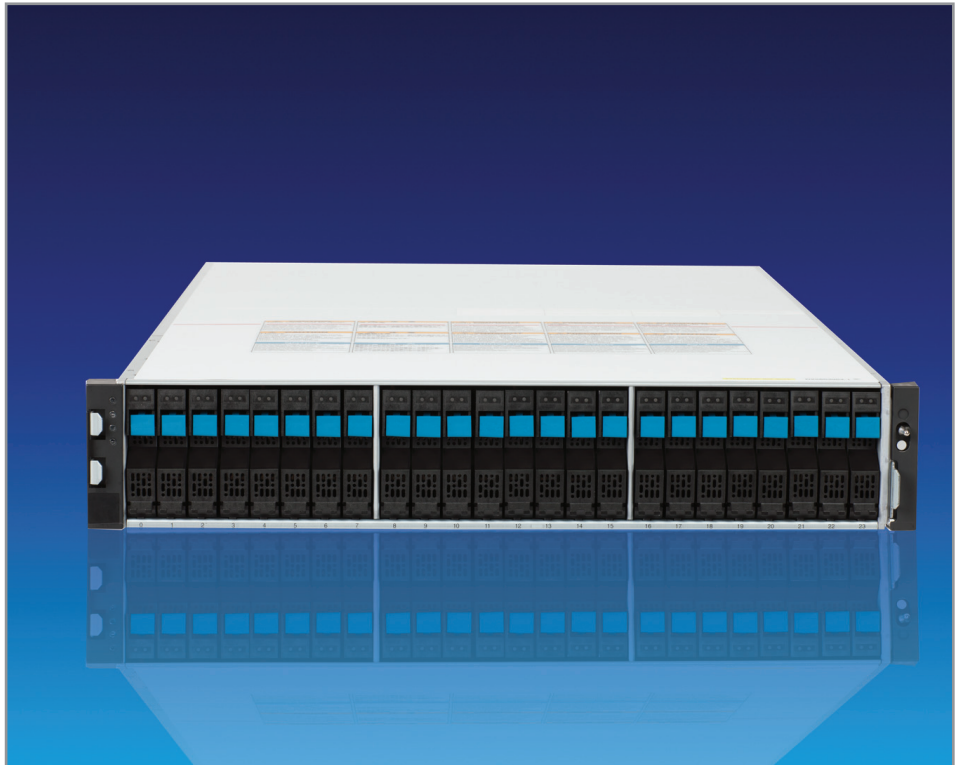

Unified E&P storage solutions from Schlumberger and Hitachi Data Systems accelerate the process of finding hydrocarbons. With a compute and storage architecture designed to handle multifaceted performance requirements, easy and seamless capacity scaling is provided in a large, single namespace.

This unified approach supports the following:

- Cost-effective information storage through advanced data management
- Workflows that integrate with existing infrastructures
- Access and data-sharing using multiple protocols
- Nondisruptive, multipetabyte capacity scaling in a single namespace
- Collaboration via industry-standard file protocols across heterogeneous clients
- Complex storage workloads through hardware-assisted architecture to drive increased workflow efficiency
- Automated implementation of data retention policies
- Optimized use of different storage technologies for block and file data

A powerful combination of block, file, and object storage with balanced scalability, for enterprise-class data protection.

Scale up and scale out—increasing speed and agility to support your petrotechnical infrastructure.

Leveraging Hitachi expertise in designing mainframe-class systems, this storage solution provides enterprise-class data protection and availability, tightly integrated with compute resources. It also simplifies compute and storage infrastructures with a unified management framework.
