Fully Integrated Field Development Optimisation for Chevron's Australia's Gas Development Opportunities

Matthew Johnson
Chevron Australia Pty Ltd
Manager Applied Reservoir Management and Technology

Chevron Australia – Key Business Needs

- Competitive Development for Higher Returns – Costs, Cycle Time, Technologies
- Tens of Billions of Capital Required for Additional Developments – Capital Efficiency is Critical
- Key Focus is on Lower Carbon Development Alternatives

Triple Crown Partnership and Chevron Australia

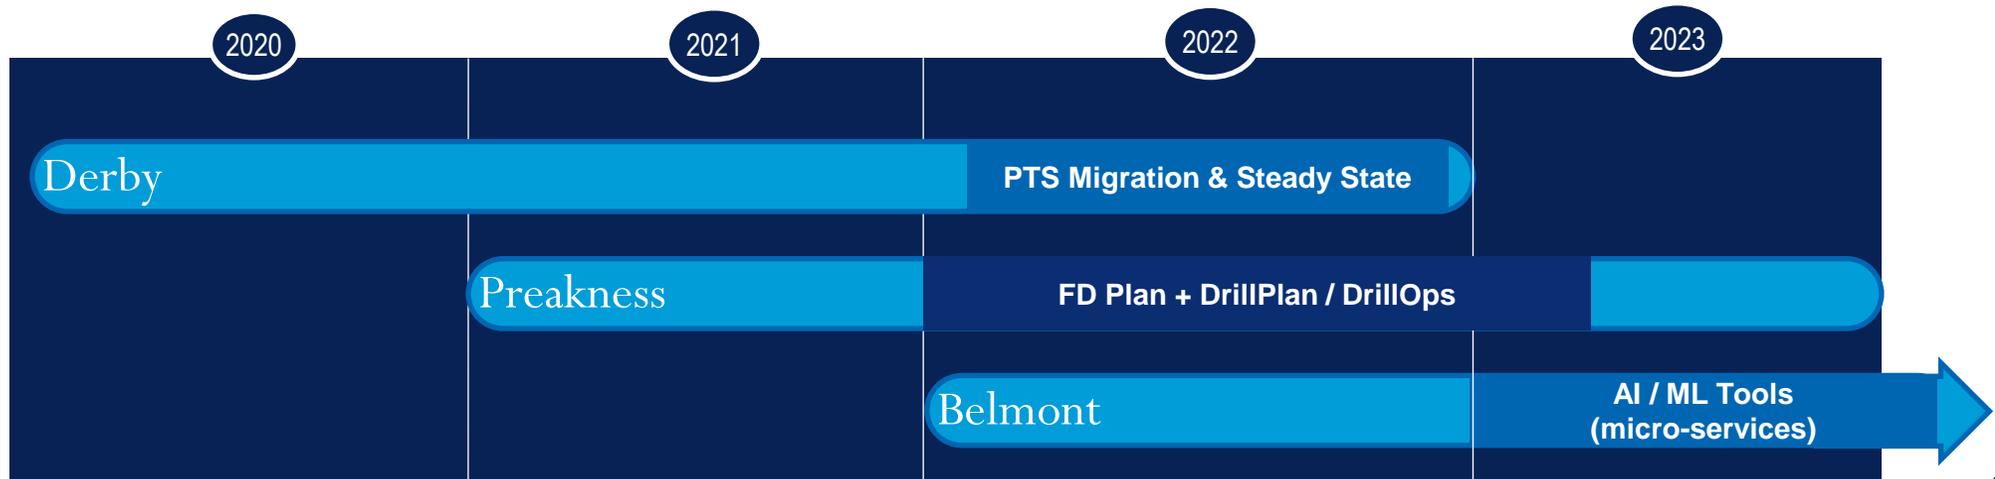

Schlumberger

The Triple Crown partnership is leveraging a unique opportunity for 3 global organizations to work together in accelerating development of cloud-native solutions and creating vastly improved, digitally enabled petro-technical workflows

Chevron Australia Triple Crown Roadmap

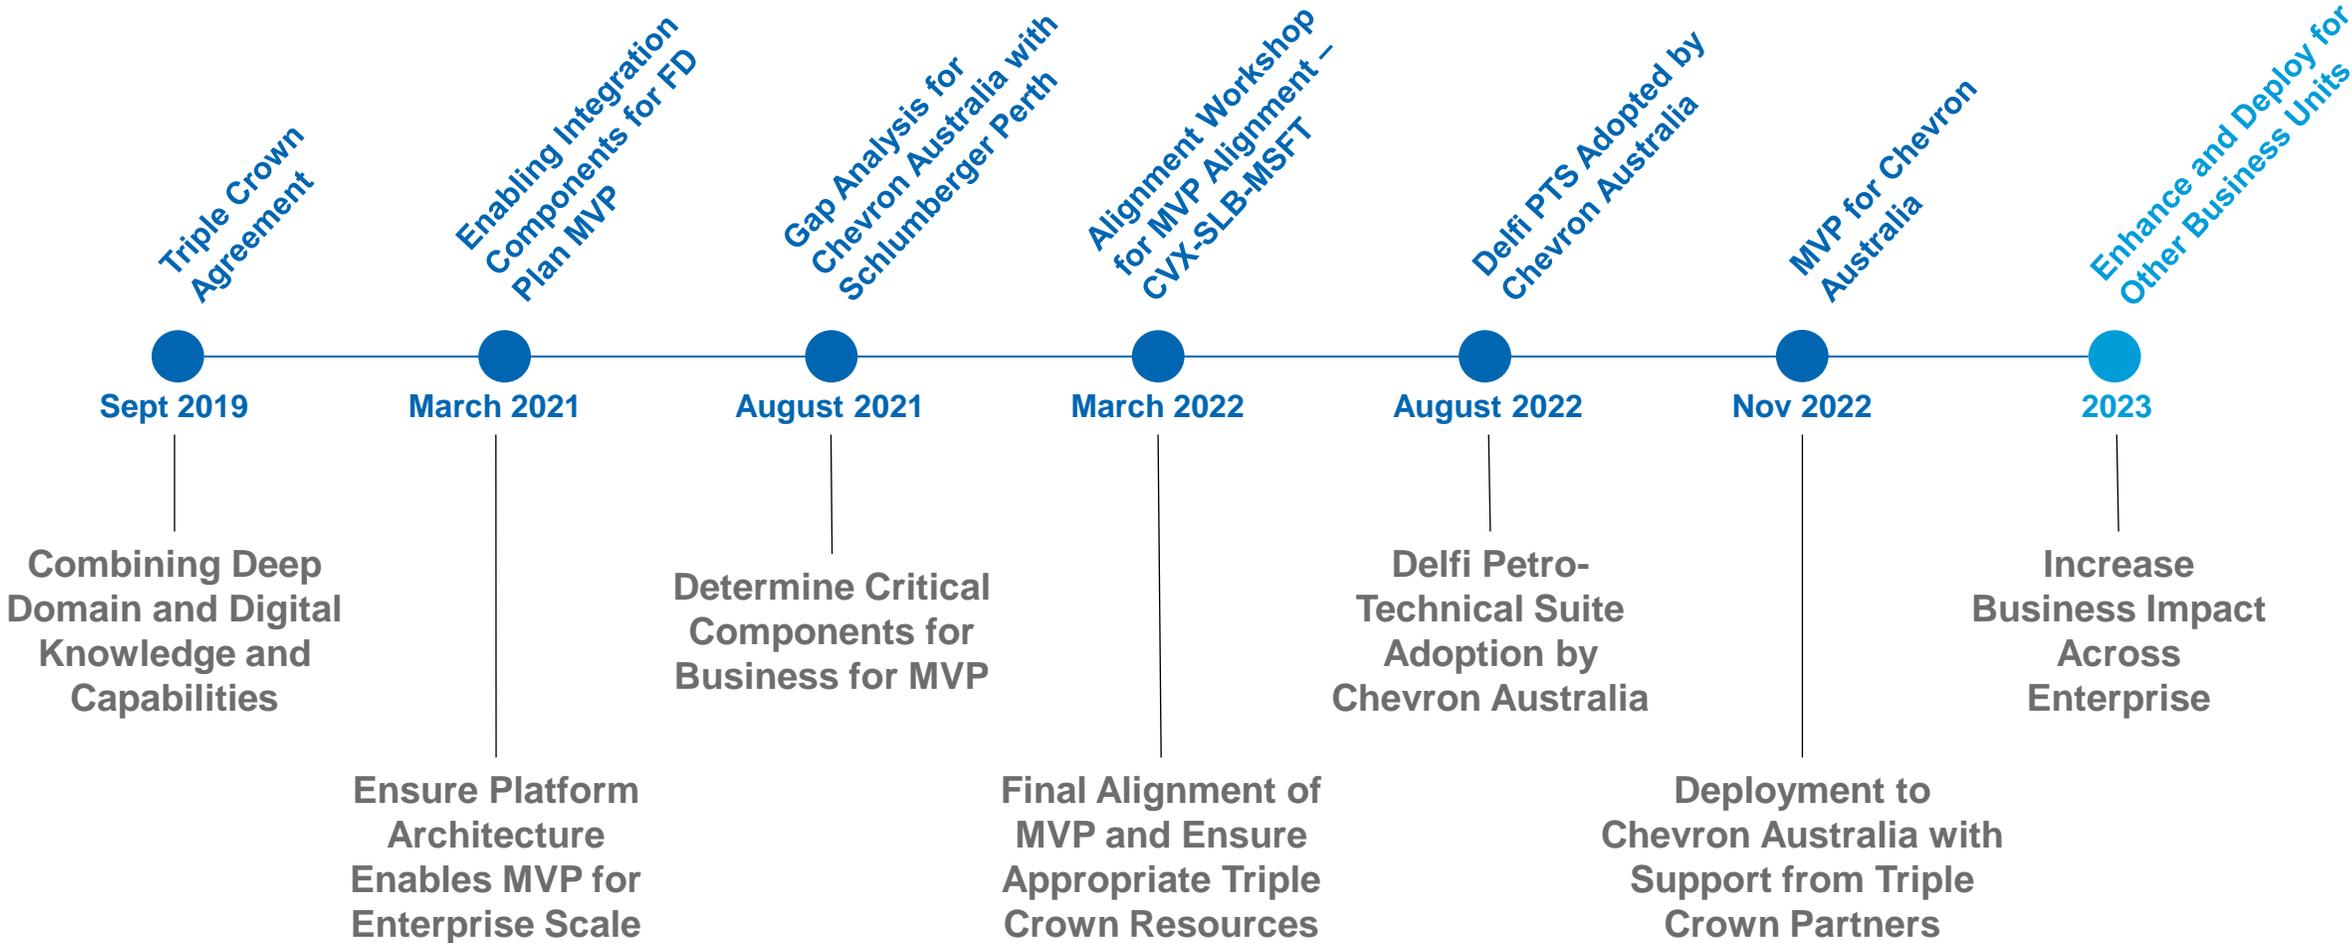

Digital Capabilities Required for Field Development Optimization

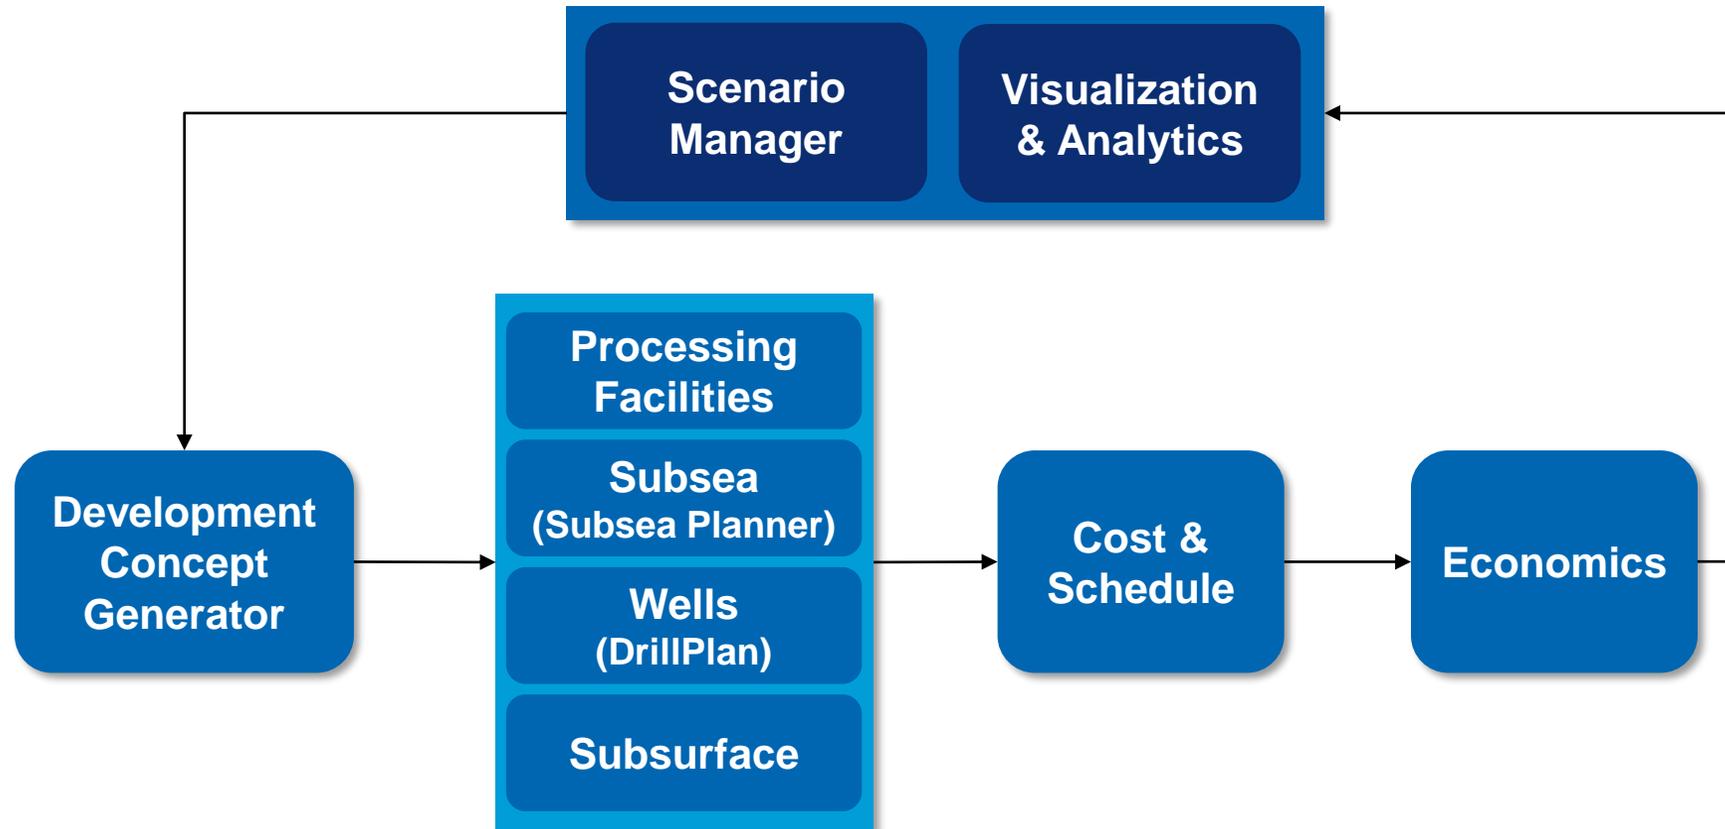

- Automation
 - End-to-end workflow
 - Significant reduction in concept generation and comparison cycle time
 - New data incorporated into scenario evaluation for rapid understanding of impact and value trade-offs
 - Automated knowledge management
- Integration, Compute and Data
 - Data architecture supports integration of significant and diverse data sets
 - Rapidly model significant number of development concept alternatives
 - Connect with dynamic data from operations
 - Quick access to high quality data
- UI/UX
 - Intuitive user interface that improves clarity of alternatives for decisions
 - Tools that end users help create and want to use!

Field Development Planning Timeline

Field Development Planning End to End Solution

- End-to-end workflow helps determine possible value paths to test for field development
- Concepts leverage models (subsurface & network), production forecasts, well alternatives and subsea equipment needs for a range of possible cost and schedule alternatives with economic determinations

KEY UNCERTAINTIES

Field D

*Schematic Data

Estimated Value for Chevron

Direct Value

Reduce Cost

- ✓ Cost Saving \$>10MM per year for Chevron Australia and greater for the Enterprise
 - Reduction in unnecessary manual efforts
 - Reduction in turnaround times for scenario modelling

Indirect Value

Data as an asset

- ✓ Enabling the use of data across the value chain

Better decision making

- ✓ Setting thresholds on business risk and maximising value by right timing

Digital machines (AI)

- ✓ Enhances our understanding of the Value Chain to generate new insights
- ✓ Reduce cycle time moving from "what if" scenarios to fully informed decision making

Resource management

- ✓ Provide data to inform field development and product supply teams on highest value opportunities
- ✓ Effectively assign resources to minimise the risk of negative outcomes

Balance risk

- ✓ Balance risk with opportunities for the portfolio under various gas supply alternatives
- ✓ Focus on critical risks for mitigation

Collaboration

- ✓ Breaking down silos in favour of collaborative ways of working

Insights and Where to Next?

- Collaboration

- The team (CVX-MSFT-SLB) are located in at least 4 different time zones across the globe
- Project acceleration occurred after the post-COVID March 2022 workshop whereby in-person collaboration enabled quick alignment on priorities and a delivery path

- Remaining Risks

- Actual costs and ability of running the end to end workflow in production – data and compute
- Continuing time zone pressures – late nights, early mornings
- Deployment - change management
- Updates and scaling for other Chevron Business Units

- Post Chevron Australia Deployment

- Automated knowledge management – adapt Explore Plan knowledge board for FD Plan
- Refinement of E2E workflow for improved cycle time reduction and significantly more cases
- Portfolio level optimisation – multiple fields and value chain incorporation
