

**Digital Field Development Planning – A collaboration between technology & process to enable fast & efficient field development planning**

# Problem Statement: Developing fields today is getting more difficult in current O&G business environment

## Case for Change

Business Portfolio

Malaysia Assets

International Assets

LNG Assets

Ventures

Business Survival & Growth (FDP context)

- **Inefficiency** in managing data quality and timeliness.
- **Longer time** for Resource Maturation.
- **Slow** decision making in important milestones event – eg FDP, UFC, UDC & UPC kept on **increasing**.
- RRR **reducing**
- **Gap** in resource / reserve matching.

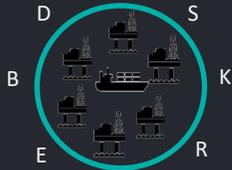

# Digital FDP (Live FDP) will pave the way for Upstream Digital Transformation by transforming from passive to intuitive working model.

Live FDP will be the foundation in stewarding Upstream into the digital age,  
Inline with current transformation efforts

# Live FDP will integrate full cycle of fields – Exploration to Abandonment

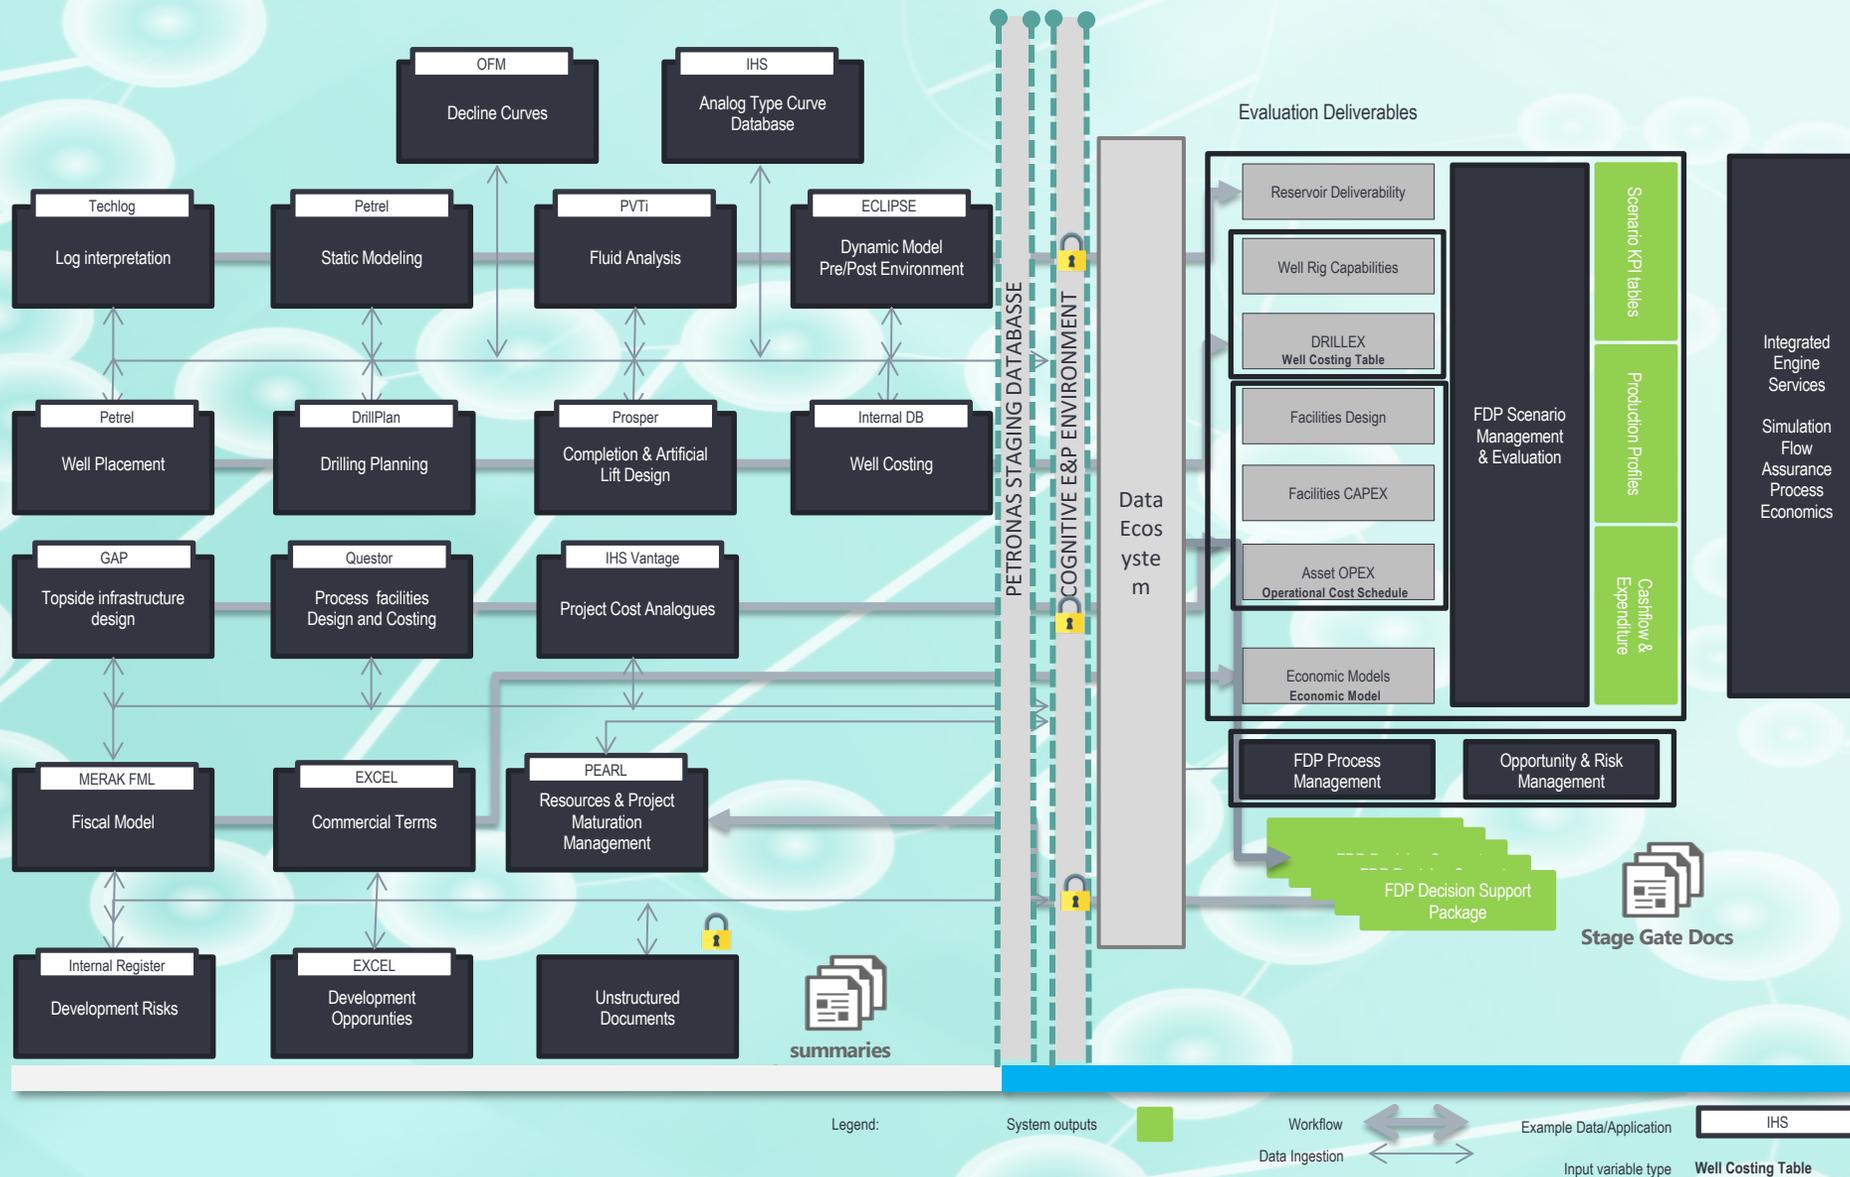

# Major Business Value obtained from Live FDP supports Business Targets

| Category                        | Benefit   | Measurement                 | Unit     | Estimated Value |
|---------------------------------|---|-----------------------------|----------|-----------------|
| Reserve Replacement Ratio (RRR) | <ul style="list-style-type: none"> <li>Processes more FDPs.</li> <li>Knowing FDP economics earlier for better issue and risk management.</li> <li>Positive RRR.</li> </ul>  | RRR                         | No.      | RRR $\geq$ 1    |
| Cost Saving                     | <ul style="list-style-type: none"> <li>Refined FDP accuracy, impacting development cost</li> </ul>  | Unit Development Cost (UDC) | \$/bbl   | 40% reduction   |
| Time Saving                     | <ul style="list-style-type: none"> <li>Shorten time taken per FDP.</li> <li>Replicate-able project and design templates.</li> <li>Increases data integrity and less re-work due to errors.</li> <li>Full-text search capability</li> <li>Distinct access of the same information by all members.</li> </ul> | Man-hours                   | Duration | 50% reduction   |

# Data Architecture that governs data pathways all the way towards smart visualization allow Top Management to make informed decisions fast with less risk

# Data Flow Diagram shows how Live FDP system assimilate current softwares and integrate them within one ecosystem seamlessly

# Live FDP timeline and implementation plan until year 2020

Develop Vision & Strategy

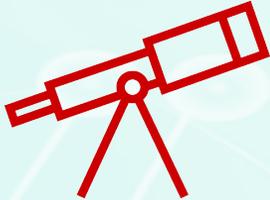

Implement

Enhance

NOW

Look Ahead

- 1 Set-up initial requirement
- 2 Collaboration with industry key-player
- 3 Ongoing communication with service partners
- 4 Workshops with TM, TP
- 5 Syndication with SCM, GTD, Legal
- 6 Proof of Concept (PoC)
- 7 Full Phase Development
- 8 Full System Deployment (Subscription)

# Ultimate Aspiration of Live FDP

## Definition

A state of connectivity

Making an informed,  
un-coerced decision

Generating an unbounded sequence of  
outcomes towards the desired result

Predicting technical risk in order to plan  
ahead and make necessary measures

Prescriptive countering measures to prediction to  
make an informed business evaluation and  
decision

## Live FDP Roles

Online

Online 24/7

Run simulation  
autonomously

Autonomous

Iterative

Multiple iterations with  
significantly less amount of  
time

Predictive

Able to predict the UDC,  
UPC, NPV, PIR based on  
historical data

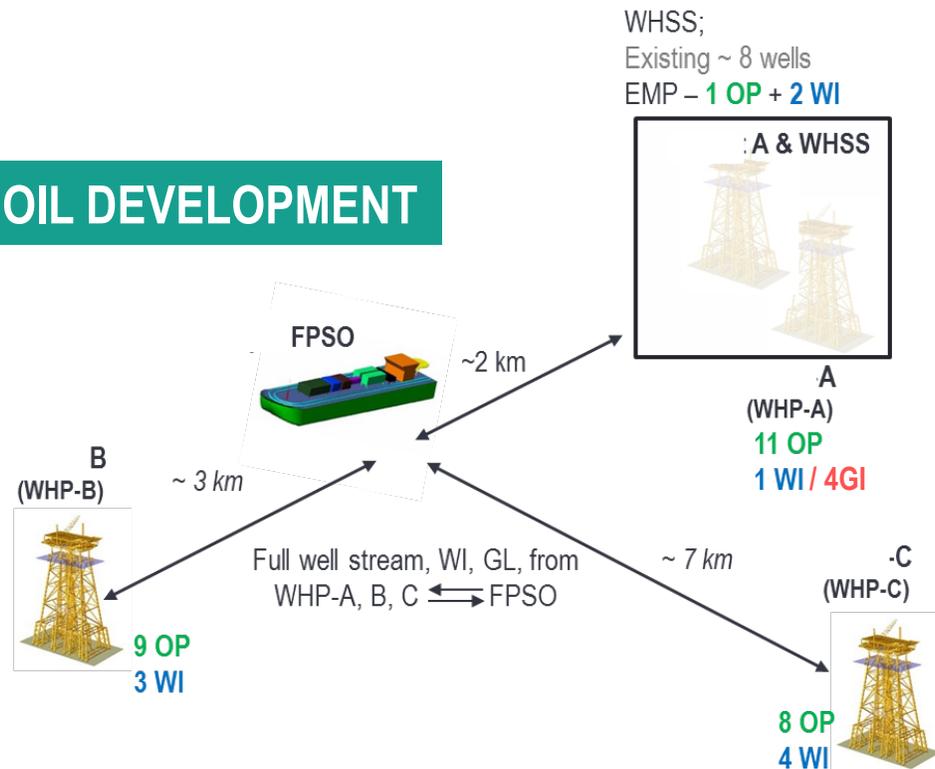

Prescriptive

Able to provide best concept  
based on range of value  
drivers

# Project S Development Concepts

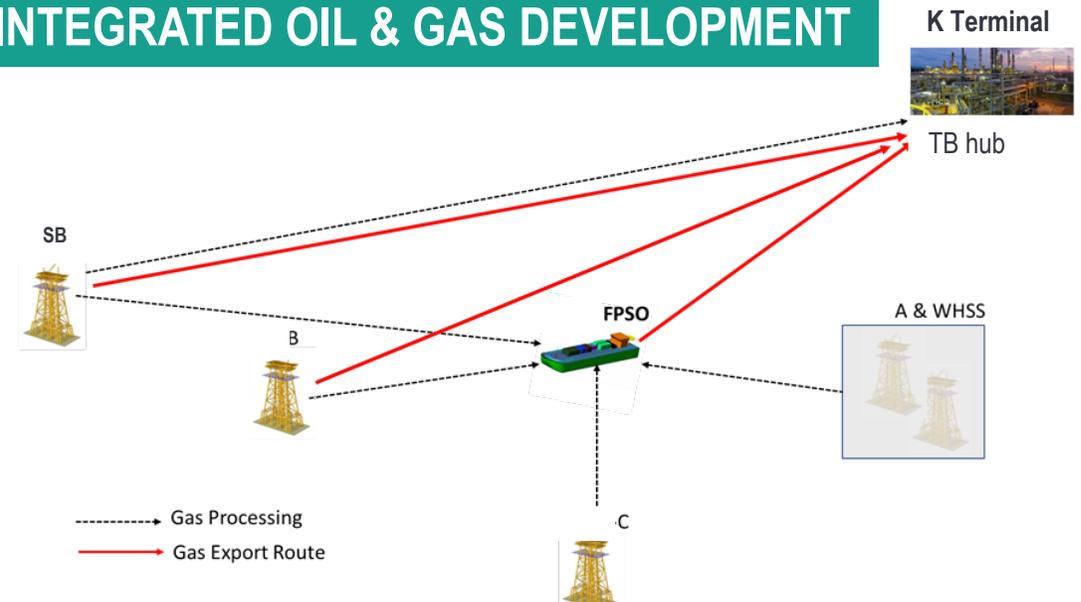

- Focus at S Main ; **D5,5.5,6.0 & E6.0,7.0,8.0** reservoirs
- 3 open-sea appraisal wells (**derisking**)
- **Infill + Water/Gas Injection** for improving oil recovery
- Installation of **WHP-B & WHP-C**
- Oil processing & Injection modules on the **FPSO** (lease)

## OIL DEVELOPMENT

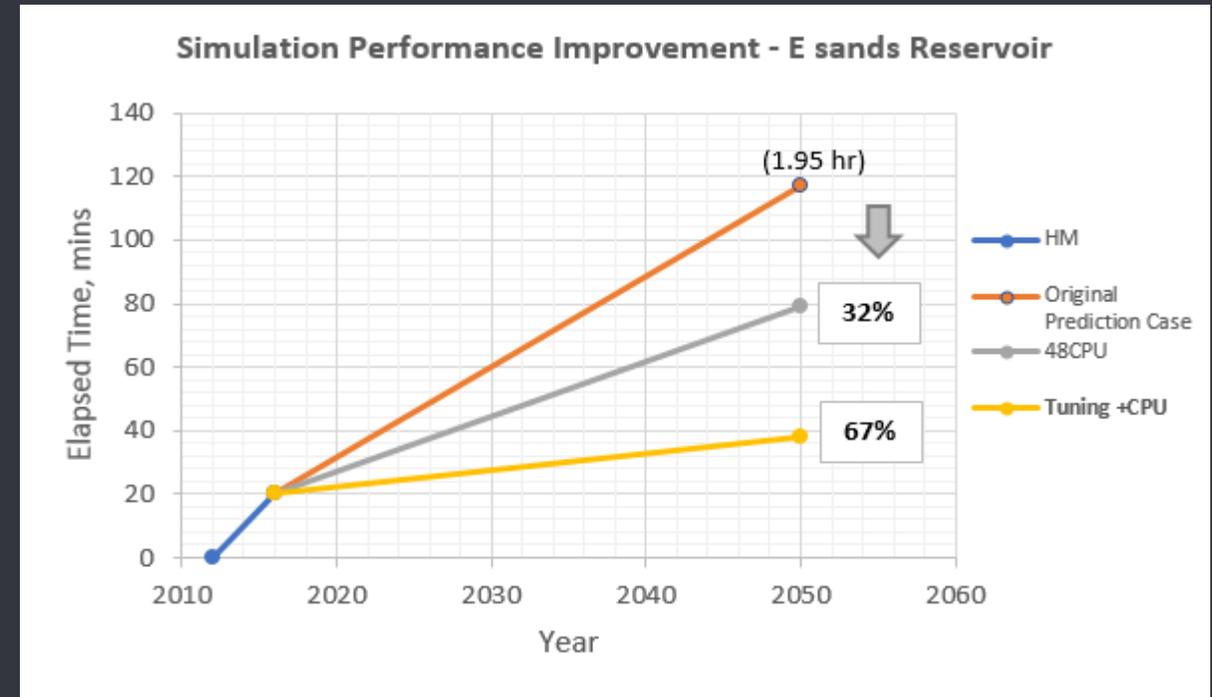

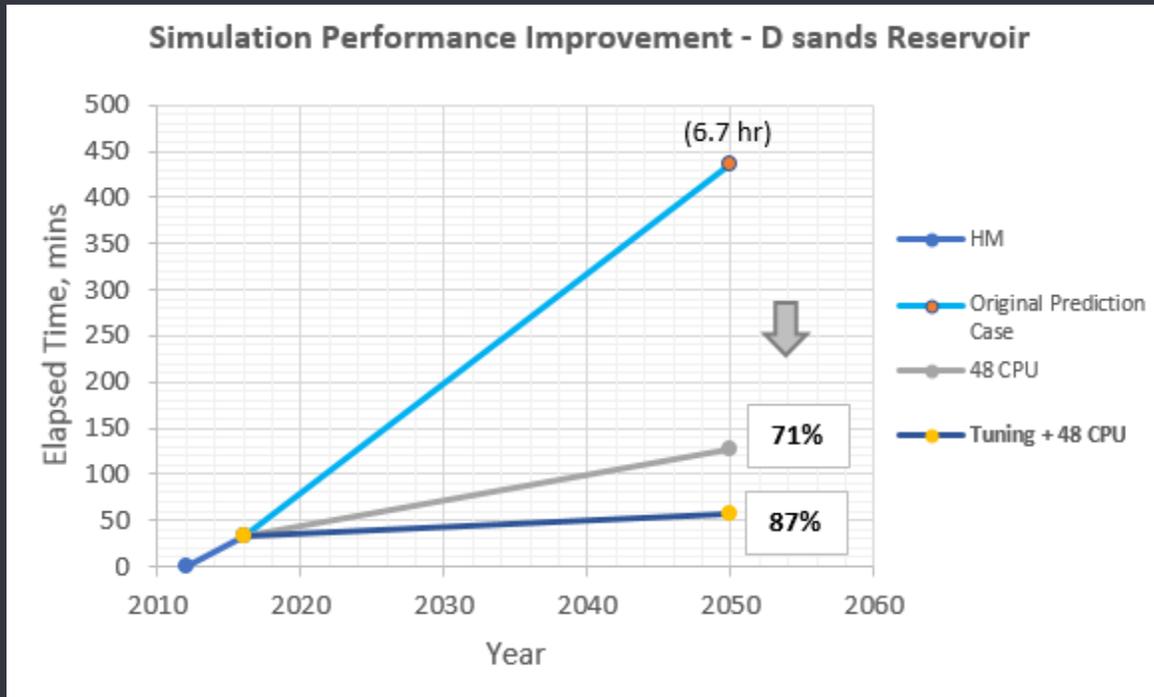

- Oil from SMain only, **Gas (NAG)** to be developed;
  - a) S Main Shallow; B100 + D35/36
  - b) S Barat; B100 down to F10/25
- Installation of **WHP-B, WHP-C & WHP-SB**
- Oil processing & Inj. modules on **FPSO** (lease)
- **Gas processing & CO2 removal;**
  - a) @ **TB** - (gas rate: 150 MMscf/d)
  - b) @ **S FPSO** - (gas rate: 250 MMscf/d)
- **Gas export route;**
  - a) **To TB Cluster** - (rate: 150 MMscf/d)
  - b) **Directly to KTerminal** via **new** or **J** pipeline - (rate: 250 MMscf/d)

## INTEGRATED OIL & GAS DEVELOPMENT

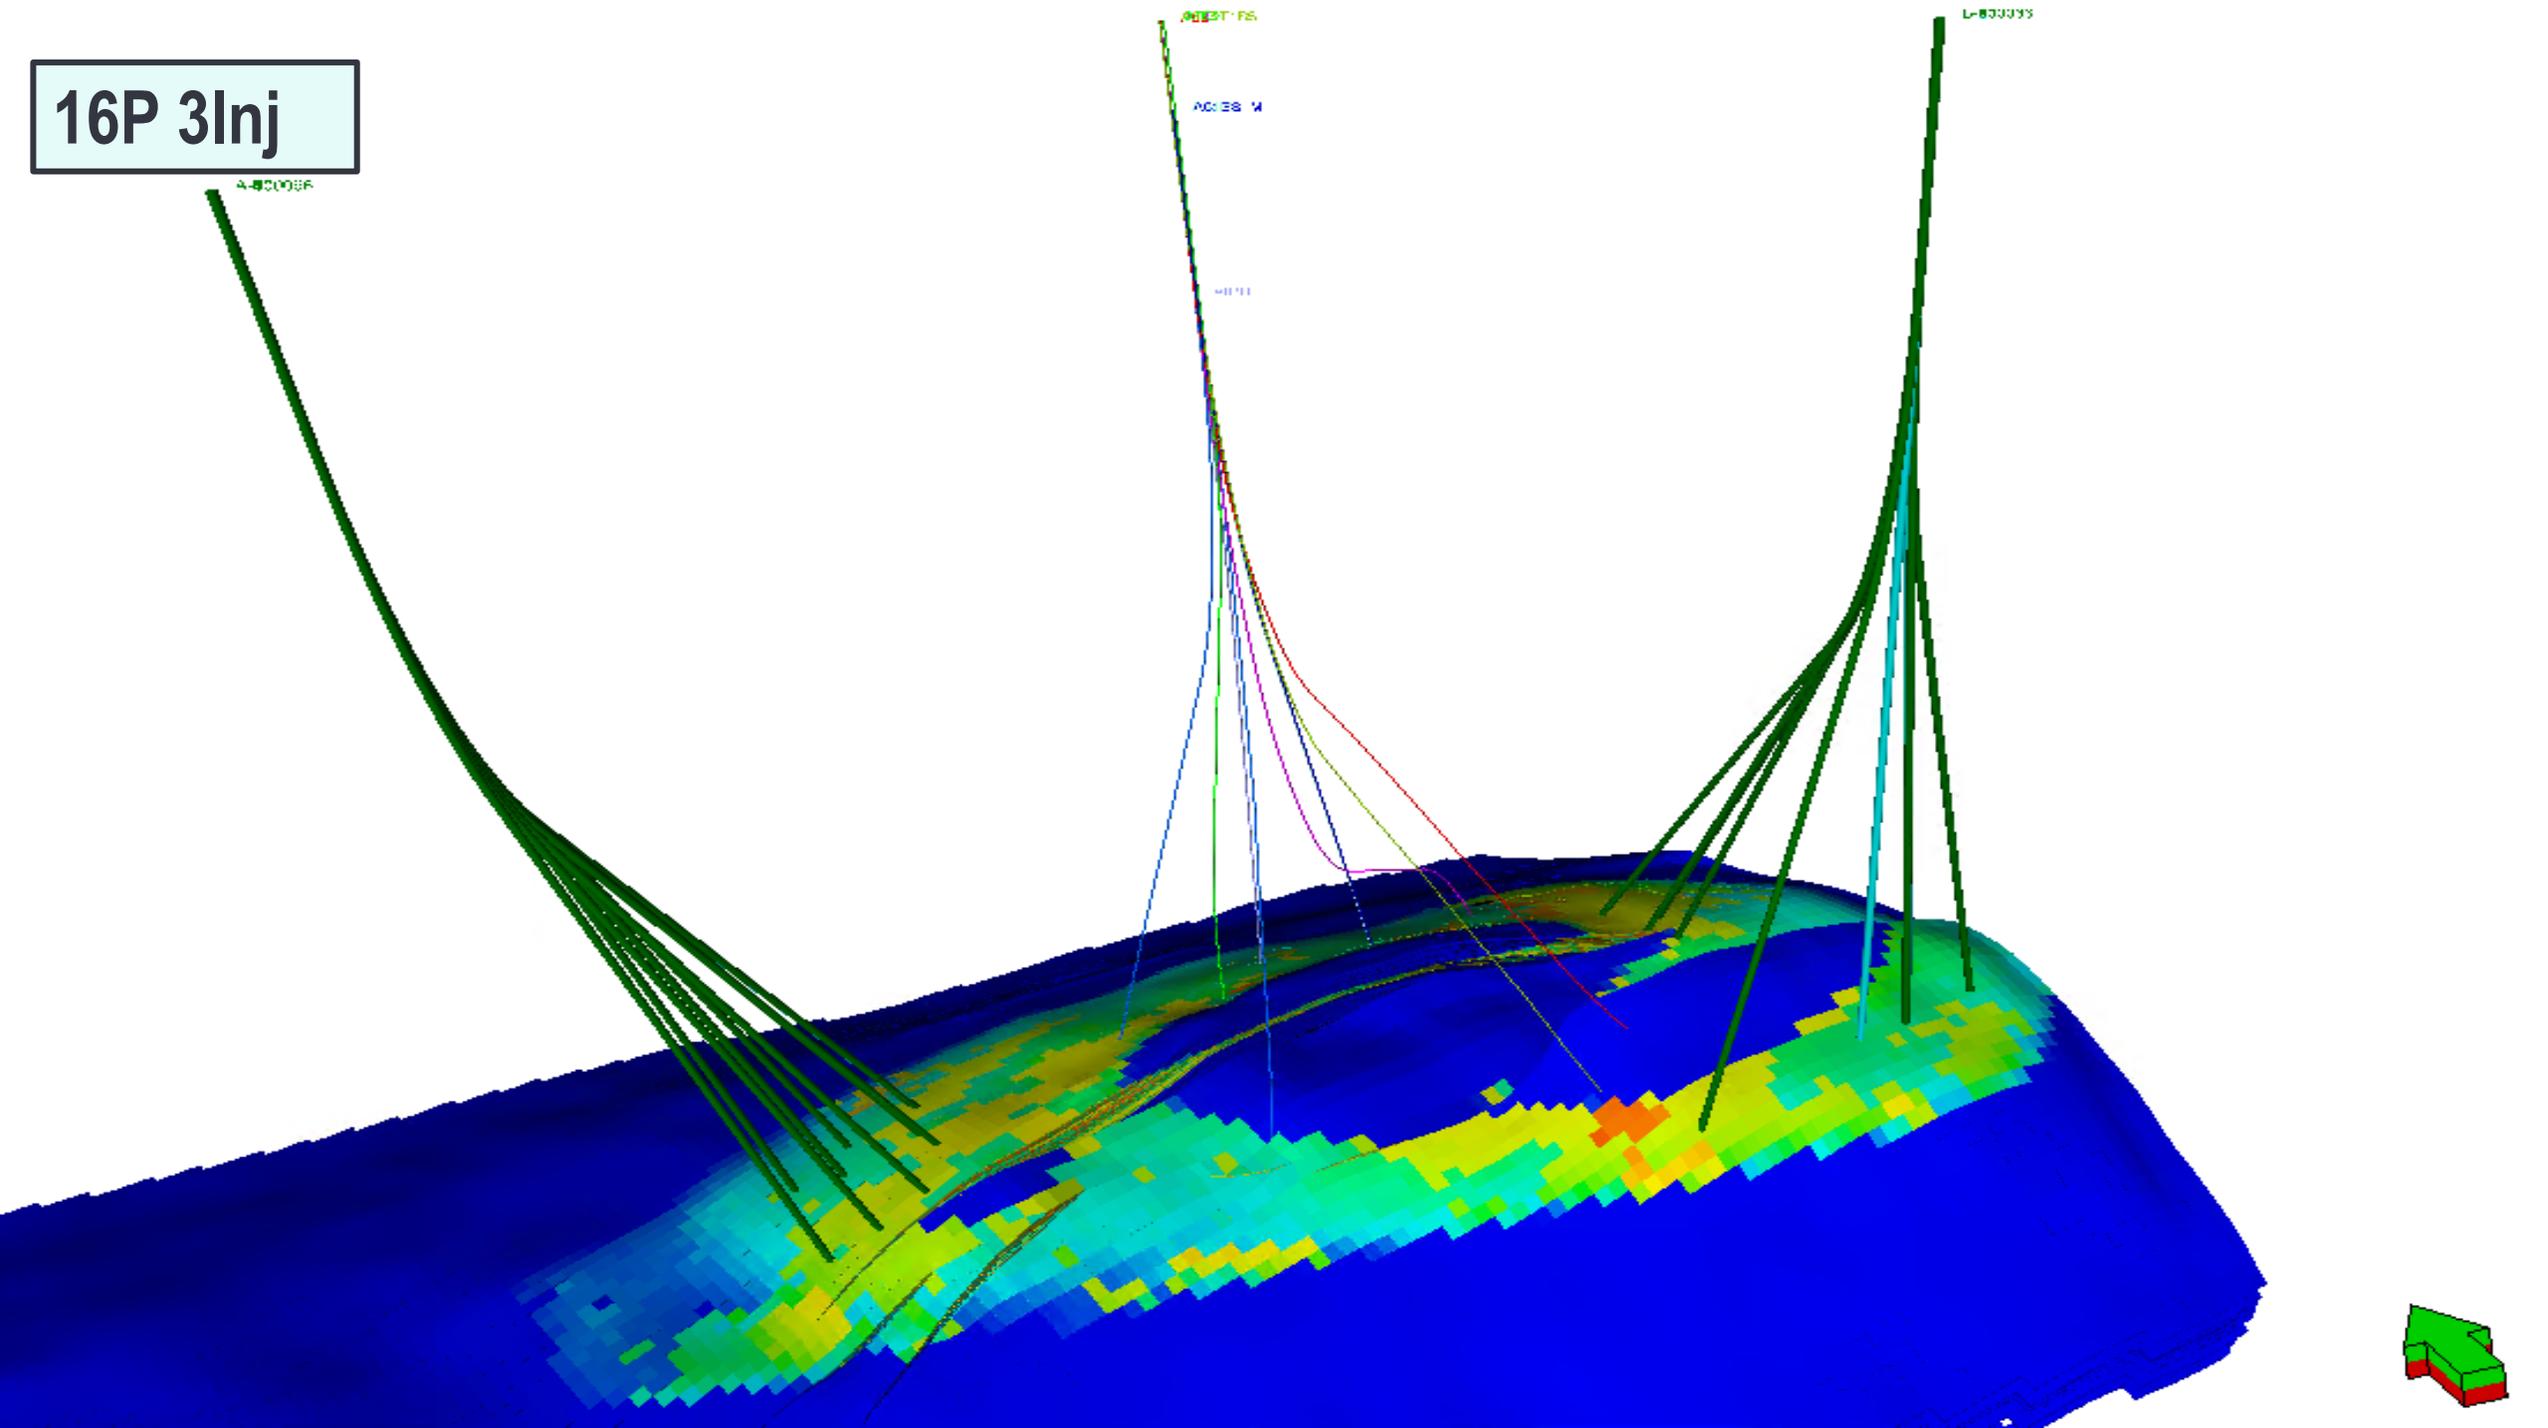

# Simulation Performance Improvement for Project S

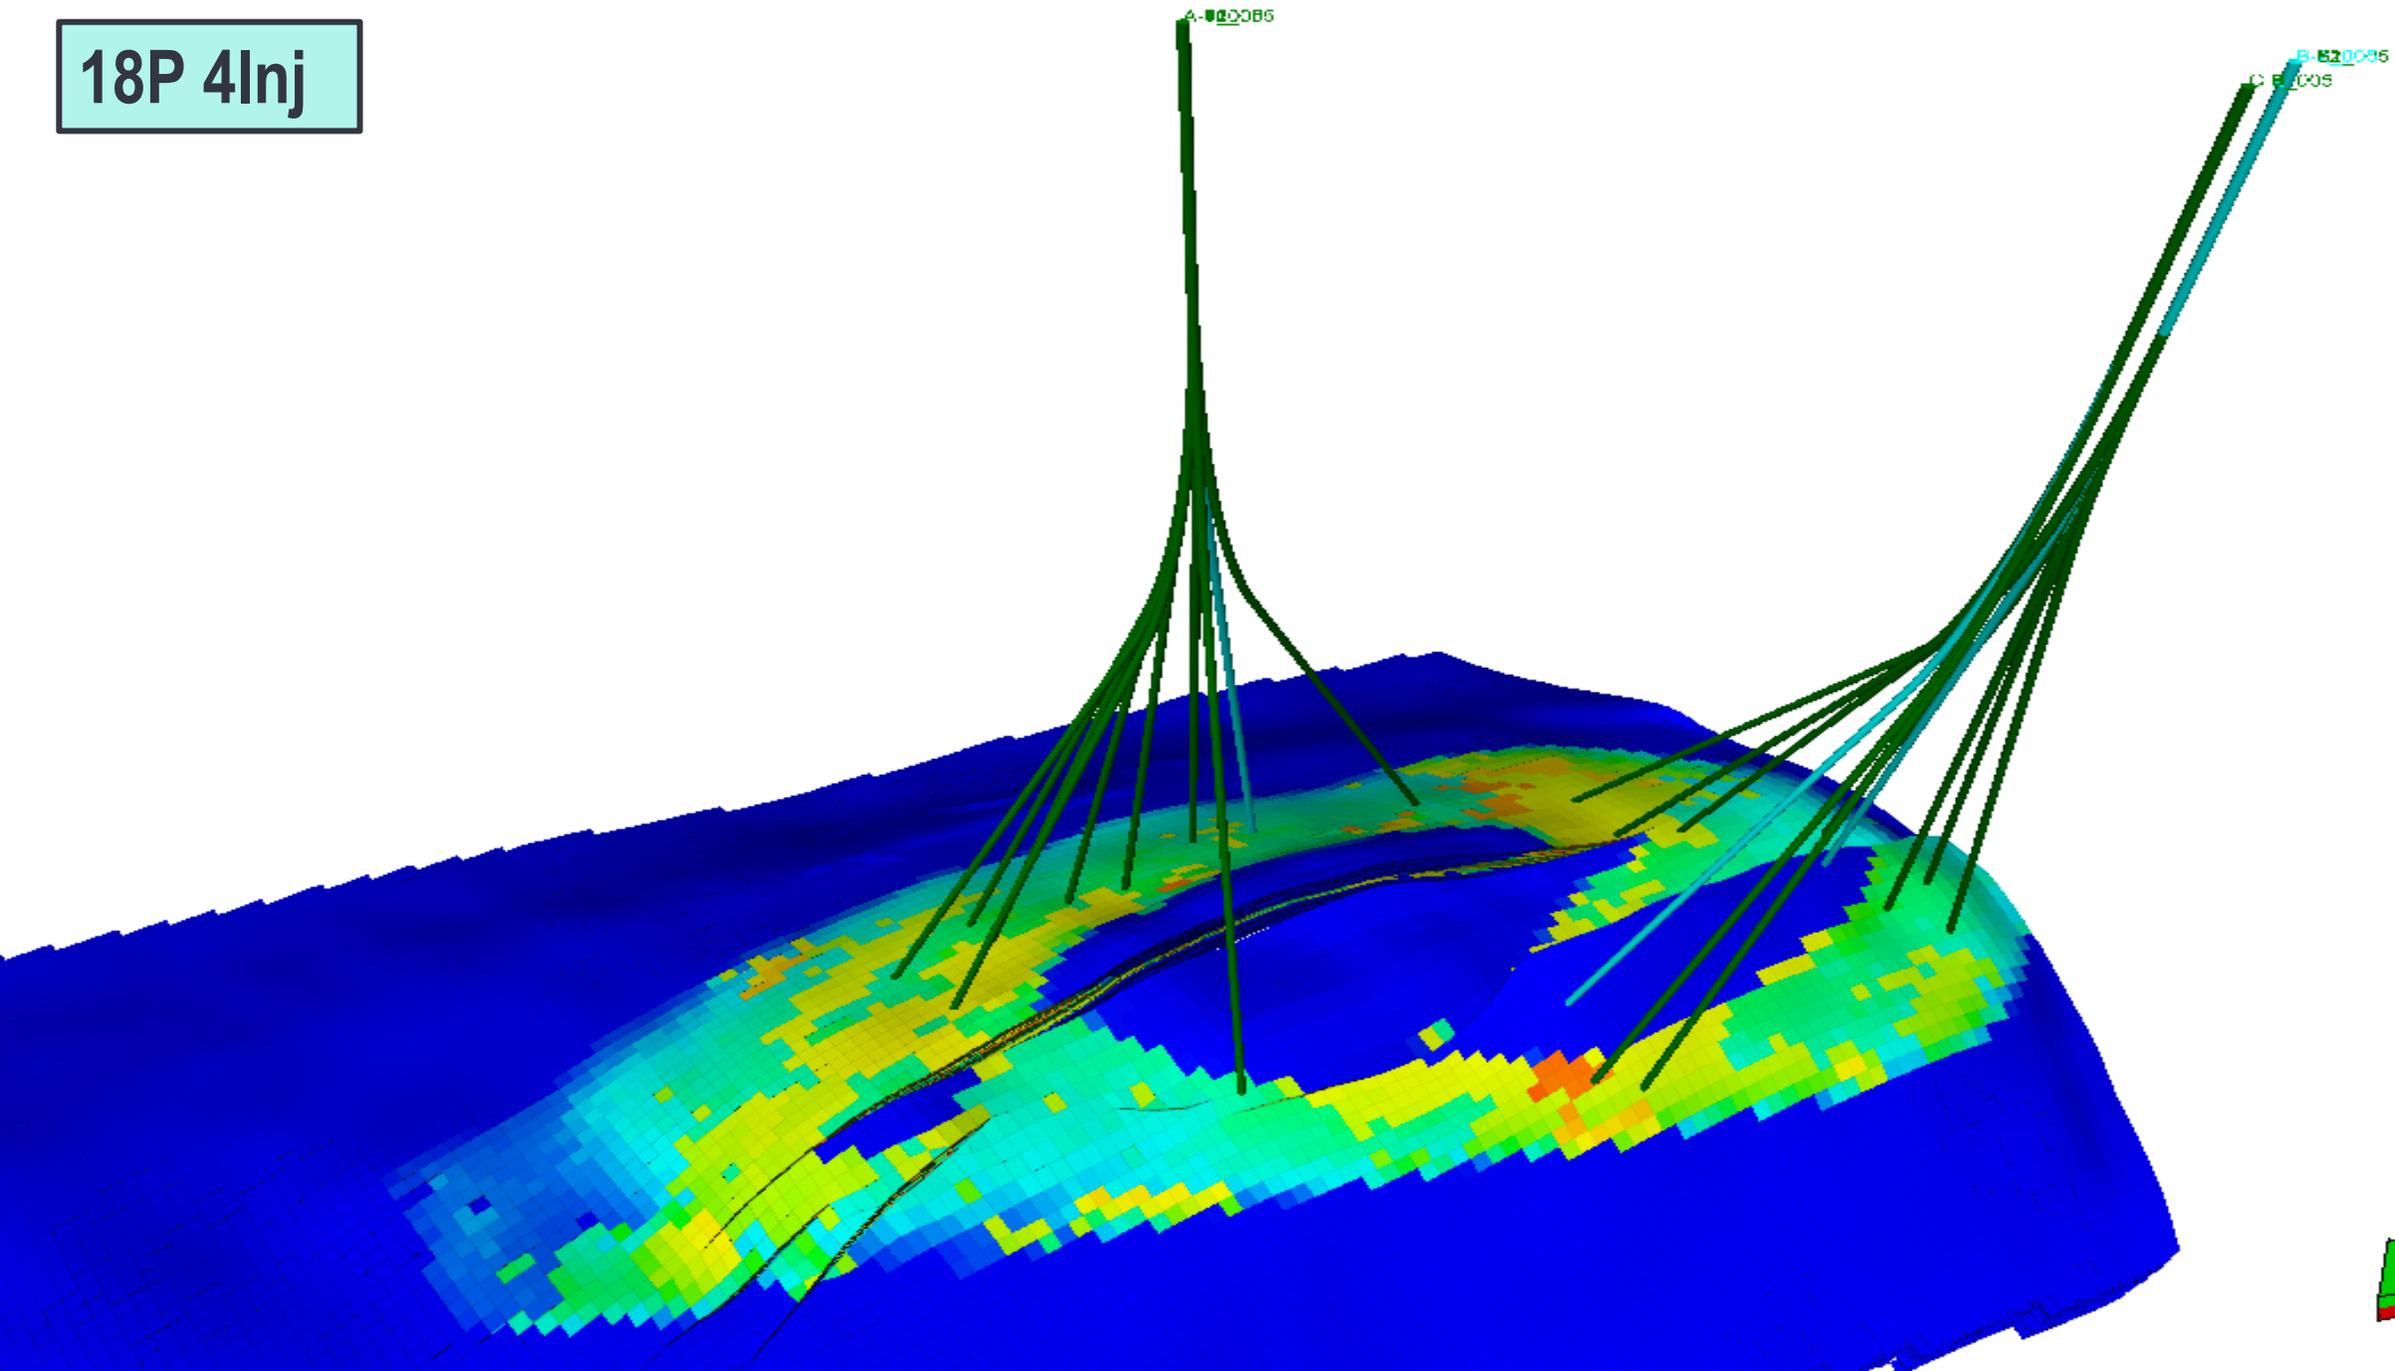

Performance Improvement Due to :

- Model Tuning
- Input Data QA
- HM Performance in Ecosystem Environment
- Elasticity provided by Ecosystem Environment
- With less than an hour per case, engineer would be able to run 6 or more cases in a day

# Project S Development Scenarios – Results & Conclusion

Preferred Dev Option

Top Value Tier  
Oil Development Only (WI/GI)

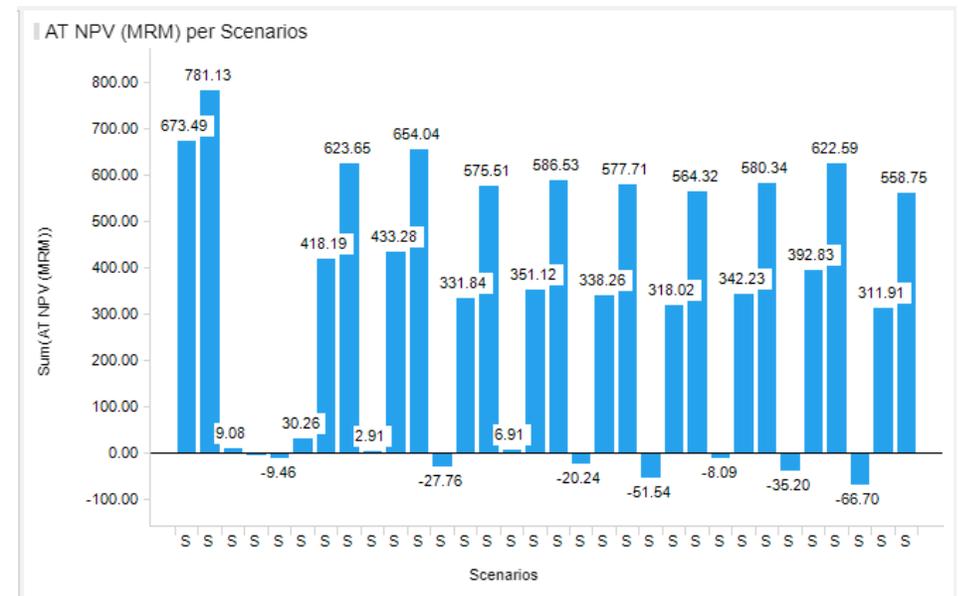

High Value Integrated Development Tier  
Oil & Gas (S Main + SB), Process on FPSO and Processed Gas Sent to K Terminal via J Pipeline, 250MMscf/day

Mid Value Integrated Development Tier  
Oil & Gas (S Main + SB), Process on FPSO and Processed Gas Sent to K Terminal via New Pipeline, 250MMscf/day

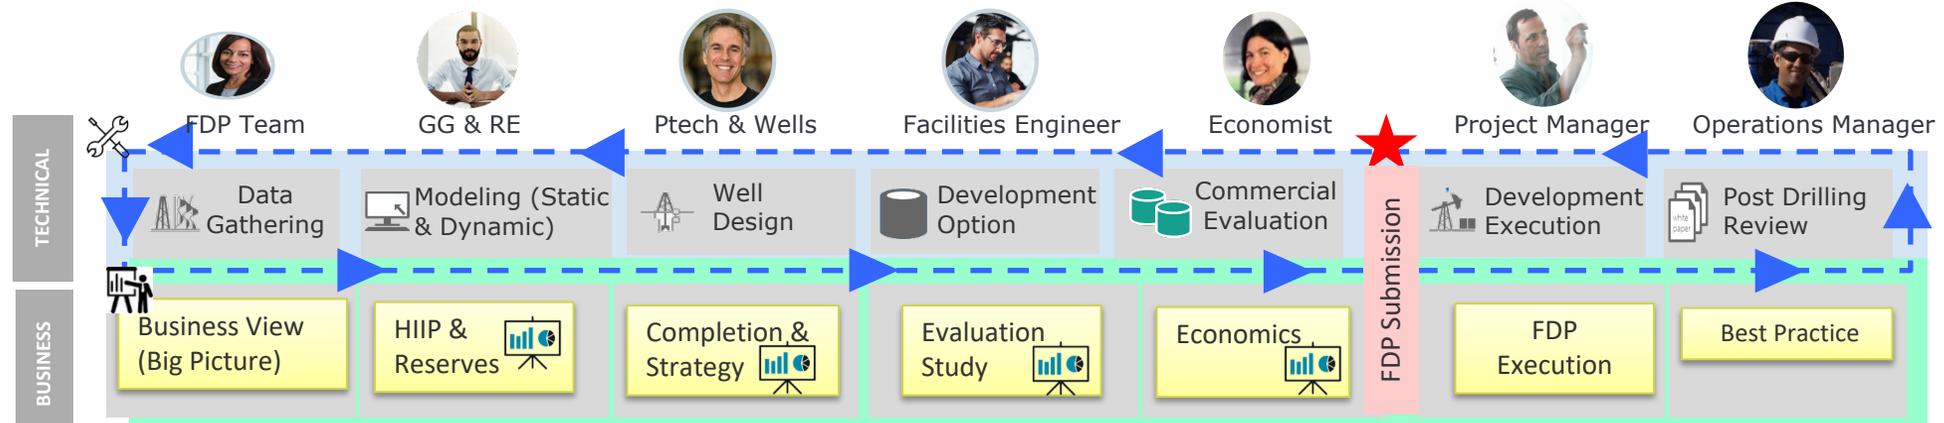

Marginal Dev Option

Marginal Value Tier  
Oil & Gas (S Main + SB), Oil process at FPSO and Wet Gas Sent to TB Hub for processing via CRA Pipeline, 150MMscf

Negative Value Tier  
Oil & Gas (S Main only), Oil process at FPSO and Wet Gas Sent to TB for processing via CRA Pipeline, 150MMscf

# Live FDP improves Efficiency, Analytics and Imposing New Way of FDP

|  | TECHNICAL  | BUSINESS  | EFFICIENCY   | ANALYTICS  | NEW WAY OF DOING THINGS   | TECHNOLOGY  |
